## 1 Practice PHP with these exercises

Practicing with exercises is a great way to solidify your understanding of PHP concepts. Here are some exercises that cover the topics from the chapters on basics, conditionals, and loops. Each exercise is designed to build upon the concepts you've learned.

### 1.0.1 Exercise 1: Basic PHP Script

**Objective:** Write a simple PHP script that outputs "Hello, World!".

### 1.0.2 Exercise 2: Variable Manipulation

**Objective:** Create three variables: a string, an integer, and a boolean. Perform the following tasks:  
- Concatenate the string with another string. - Increment the integer by 10. - Toggle the boolean value.

### 1.0.3 Exercise 3: Conditional Greetings

**Objective:** Write a PHP script that uses an if-else statement to output "Good morning" if the time (in hours) is less than 12, and "Good afternoon" otherwise.

#### 1.0.4 Exercise 4: Age Group Classifier

**Objective:** Use an if-elseif-else statement to classify and echo an age variable into categories (child, teenager, adult, senior). Define the age categories as you see fit.

#### 1.0.5 Exercise 5: Loop through Numbers

**Objective:** Write a for loop that prints numbers from 1 to 50. For each multiple of 3, print "Fizz" instead of the number, and for each multiple of 5, print "Buzz". For numbers which are multiples of both 3 and 5, print "FizzBuzz".

#### 1.0.6 Exercise 6: Array Iteration

**Objective:** Given an array of names (`["Alice", "Bob", "Charlie"]`), use a foreach loop to print each name with a greeting, like "Hello, Alice!".

#### 1.0.7 Exercise 7: Factorial Calculator

**Objective:** Write a PHP function to calculate and return the factorial of a number using a for loop. Test the function with different numbers.

#### 1.0.8 Exercise 8: Prime Number Checker

**Objective:** Create a PHP script using a while loop that checks and prints whether each number from 1 to 100 is a prime number.

#### 1.0.9 Exercise 9: Do-While Username Prompt

**Objective:** Simulate a do-while loop that continues to ask for a username until the input is "admin".

#### 1.0.10 Exercise 10: Switch Case with Colors

**Objective:** Use a switch case to handle different colors input by the user. If the user inputs "red", "blue", or "green", output a message like "You chose red." Include a default case that says "Unknown color".

---

These exercises are designed to challenge and reinforce your understanding of PHP fundamentals, conditionals, and loops. Feel free to adjust the difficulty or add new requirements to the exercises to suit your learning needs!
